LD15-25BxxR2 series AC-DC converters is one of Mornsun's new generation compact size power converter. They feature wide input range accepting either AC or DC voltage, high reliability, low power consumption and reinforced insulation. The product corresponds to the use of three-phase alternating current with two phases to achieve ground fault protection, while meeting the power supply requirements of the system board in the power system, such as the application of charging point. All models are particularly suitable for industrial control, electric power, instrumentation and smart home applications which have high requirement for dimension and don't have high requirement on EMC. For extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

Output Filter Components:

We recommend using an electrolytic capacitor with high frequency, and low ESR rating for C2 (refer to manufacturer's datasheet). Choose a Capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C1 is a ceramic capacitor used for filtering high-frequency noise and TVS is a recommended suppressor diode to protect the application in case of a converter failure.
